

0. Workflow

Open your browser (Chrome or Safari) and go to `http://localhost:3000`.

Phase 1: Authentication & Multi-Tenancy

Step 1: Sign In as a Tenant Member (Alice)

1. Navigate to: `http://localhost:3000/login`
 2. In the "Quick Demo Personas" box at the top, click "Alice" (or enter `alice@northwind.com` / `password123` and click **Sign In**).
 3. **What to verify:**
 - You are redirected directly to the **Build** page (`/build`).
 - The top-right shows **Alice Smith** and **Northwind Labs**.
 - Notice that the sidebar does **not** show the "Admin Review" link (because Alice is a regular tenant member).
-

Phase 2: Agent Builder (4-Step Build Flow & Interrupts)

Step 2: Build a New Agent from Plain English

1. You are on `http://localhost:3000/build`.
2. Look at the right sidebar: Step 1 (**Understand**) is active.
3. In the chat input at the bottom, paste this prompt and click the **Send** button (or press Enter):

```
I want an agent that triages open GitHub issues and posts a digest to Slack
```

4. **What to verify (Step 1 → Step 2 Interrupt):**

- The bot responds explaining that it understands your goal and selected a **Coordinator + Specialist** topology (Triager + Reporter).
 - The right sidebar marks Step 1 as completed (green checkmark ✓) and highlights Step 2 (**Pick Tools**).
 - An interactive **Server Selection Card** appears in the chat showing **GitHub Integrations** and **Slack Core** with checkboxes.
5. Check both **GitHub Integrations** and **Slack Core**, then click the green **Confirm Selection** button.
6. **What to verify (Step 3 → Step 4 Completion):**
- The bot checks credentials in the Credential Vault for both servers.
 - Step 3 (**Check Connections**) passes ✓.
 - Step 4 (**Build & Deploy**) completes: a green success card appears with:
 - Name: **Issue Digest**
 - Grade: **B**
 - Functionality Score: **84 / 100**
 - Safety Score: **90 / 100**
7. Click the "**View Agent**" button inside the card (or navigate to `/agents`).
-

Phase 3: MCP Server Registry & Introspection

Step 3: Inspect & Register Tool Servers

1. In the left sidebar, click **MCP Registry** (`http://localhost:3000/registry`).
2. **What to verify:**
- You see two server cards: **GitHub Integrations** and **Slack Core**.
 - Both show the green **OK** badge and the **Private** scope badge.
 - Click the row to expand the tools: observe the risk level badges:
 - `list_issues` , `get_issue` , `list_channels` → **Read** (gray)

- `create_issue`, `close_issue`, `post_message` → **Write** (yellow)

3. Click the top-right button **" + Register Server"**:

- Server Name: `Jira Cloud`
- URL: `http://localhost:8000/mock/github`
- Transport: `SSE`
- Click **Connect & Introspect**.

4. **What to verify:**

- The modal closes with **no errors**, and the new server card appears immediately with its introspected tool list.

Phase 4: Credential Vault (Connections)

Step 4: Verify Token Masking & Revocation

1. In the left sidebar, click **Connections** (`http://localhost:3000/connections`).

2. **What to verify:**

- You see the existing connection for **GitHub Integrations**.
- Under the **Secret** column, the token is strictly masked as `.....` (the raw secret is never exposed to the client).
- Status badge shows **Active** in green.

3. Click **" + Add Connection"**:

- Select **Slack Core**.
- Enter a test API token (e.g. `xoxb-test-token-12345`).
- Click **Save Connection**.

4. **What to verify:**

- A new row appears for Slack Core with masked dots `.....` and **Active** status.

5. Click **Revoke** on any connection and confirm the prompt → the status turns to red **Revoked**.

Phase 5: Agent Detail, Graph & Playground (HITL Gates)

Step 5: Explore Agent Architecture & Safety

1. In the left sidebar, click **My Agents** (`http://localhost:3000/agents`).
2. Click on the **Issue Digest** card to open its detail page (`/agents/a1000000-0000-0000-0000-000000000001`).
3. On the **Overview** tab, verify:
 - **Interactive Architecture Graph:** Visual SVG displaying the `supervisor` node routing to `triager` and `reporter`, connected to their respective tools.
 - **Tools Table:** Lists `github.list_issues` (Auto-approved) and `slack.post_message` (Approval Required).
 - **Score Breakdown:** Shows Functionality (84/100) and Safety (90/100) circular gauges with checklist items.

Step 6: Test Human-in-the-Loop (HITL) in the Playground

1. Switch to the **Playground** tab.
2. In the chat bar at the bottom, type:
and click **Send**.

Triage open issues and send digest to Slack

3. What to verify (The Safety Gate):

- The agent runs the Read tools automatically (`list_issues`).
- Before executing the Write tool (`slack.post_message`), execution **pauses**.
- A bright **Orange Approval Banner** appears:

"Agent wants to call slack.post_message (risk: write) on channel #eng-alerts. Approve?"

4. Click the green **Approve** button.

5. **What to verify:**

- The agent execution resumes.
- The response appears: `Digest posted to #eng-alerts: "Morning Triage: 3 open issues (#101 P0, #102 P1, #103 P2)."`

6. Switch to the **Runs** tab → the run is logged with **Success** status and latency.

Step 7: Export Postman Collection

1. Switch to the **API** tab.

2. Click "**Download Postman Collection**".

3. **What to verify:**

- Your browser downloads `Issue_Digest_postman_collection.json` containing the ready-to-use API call with Bearer authentication.

Phase 6: Admin Review Queue & Marketplace Federation

Step 8: Submit Agent for Review

1. Switch to the **Settings** tab.

2. Scroll to the **Publish to Marketplace** section.

3. Click "**Publish to Marketplace**".

4. **What to verify:**

- The status badge changes to yellow: **Pending Review**.

Step 9: Switch to Admin Persona

1. In the top-right corner, click **Sign Out**.

2. On the login screen, click the **"Admin"** demo persona button (`admin@forge.com` / `admin123`).
3. In the sidebar, the **Admin Review** tab is now visible!

Step 10: Approve in Review Queue

1. Click **Admin Review** (`http://localhost:3000/admin/review`).
2. **What to verify:**
 - The queue lists **Issue Digest** waiting for review.
 - The detail panel displays the sanitized blueprint (all credentials and tenant IDs removed).
 - The functionality score (84) and safety score (90, Grade B) are displayed.
3. Click the green **"Approve & Publish"** button.
4. **What to verify:**
 - The item is cleared from the pending queue.

Step 11: Verify Marketplace Federation

1. Click **Marketplace** (`http://localhost:3000/marketplace`) in the sidebar.
2. **What to verify:**
 - **Issue Digest** is now live on the public Marketplace alongside **Release Notes Writer**.
 - Click on **Issue Digest** → click **"Add to my workspace"**.
 - A confirmation confirms that the sanitized template has been cloned into your workspace!

Summary Checklist of What Was Verified

Test Area	What Was Proven
Authentication	Multi-tenant isolation between Alice (Northwind Labs) and Admin (Forge Platform).

Test Area	What Was Proven
Build Flow	4-step LangGraph lifecycle with interactive server selection and connection checks.
MCP Registry	Live tool discovery with classification into Read, Write, and Destructive.
Credential Vault	Sensitive tokens masked with and full revocation support.
Playground & HITL	Platform halts write operations until human clicks "Approve".
API Export	Single-click Postman collection generation for third-party systems.
Marketplace Federation	Credential sanitization, admin approval queue, and cross-workspace installation.
